

FetchitGO - A Smart Control Hub

FetchitGO is an IoT remote that works alongside other devices and mobile applications to serve daily needs, with full control at home or on the move. It is a simple and sleek pad of smart buttons that allows a family to create shortcuts to their favorite tasks & actions. With just a push button, this device can save time in your day to day life by automating important daily tasks such as starting coffee-maker, providing medication reminder, calling a taxi or even locating a misplaced phone.

TANTIV4

What FetchitGO Can Do!

- Shortcut to manage daily tasks and actions
- Lightweight, can be stowed anywhere
- Simple, can be used by any family member
- Easy setup process
- No display, resulting in long battery life (> 18 months)
- "Low battery" status indicator
- Smart phone independent
- Supports Over The Air (OTA) firmware update
- Allows programmability for 16 functions
- Easy web and mobile (iOS and Android) app interface
- Device buttons can be reconfigured if needed
- Button actions can be written on the device with markers, making it easier to change button configuration
- IFTTT support for creating 'recipes' that allow FetchitGO device and other devices to work together

FetchitGO Makes Life Easier

Easy to setup and use

Its setup is very easy and just have to press the button and swipe, to carry out a task.

Versatility

This multi-function device can be configured for sending reminders, calling a taxi, activating the home security system, switching on/off lights, setting reminders and so on.

Family device

It can be used by any member of the family.

No loss of privacy

There is no compromise in privacy as there is no need to share apps or mobile, to use any Smart product.

Predictive maintenance

The batteries can work upto 18 months with "low battery" status indicator.

One device controls all

The need for having separate controls for Smart home appliances, shopping, sending reminders etc, is eliminated.
